

Get the suit that fits with our easy directions!

OK, here we go! It is time to get the measurements for your perfect suit!

A lot of time was put into trying to make sure this is clear, and to be sure that you get the suit you want. If you decide to cut corners, or not follow my advice, then I guess the cost of the suit means a lot less to you than it does to me. I can't possibly stress enough that this is going to *fit* you. Not slip on like a jacket, not slide on like a pair of pants. You're going to have to sit to put the legs on, pull to get the top over your shoulders. It is going to be *great* - *if* you take accurate measurements!

First, use up the paper and print this out. I have even included two sheets to write the measurements. Why two? Keep reading!

Next, find someone with whom you are really friendly. You're gonna get naked for this. No way you can do it over clothing. Not even the zentai suit I was wearing. No, I wasn't going to do the photo shoot naked!

Next, get yourself a nice long measuring tape made of cloth or plastic. If you don't have one, then get your derriere off to WalMart or a fabric store and blow the \$1.98. You aren't measuring 2X4s here. That nice Stanley tape is NOT going to cut it. Neither is a piece of string against which you *think* you can copy the measurements. Again, please, do it my way, or you won't be happy with the suit!

You'll also need a strip of vinyl electrical tape, or a narrow strip of duct tape (you've gotta have duct tape). That will be explained in the coming pages.

Start at A, follow through to Z, writing all the measurements down on the first sheet to the nearest 1/4". If you are getting tit flaps, also do TIT1 and TIT2.

When you are done, set sheet one aside. Don't look at it - really. Our minds are programmed to prove ourselves right. Now do it all over again. Yes, honestly. When you are all done, compare the two sheets. Anything that doesn't match should be done a *third* time. On those, average the three measurements and use the average (for the math challenged... $\text{measurement1} + \text{measurement2} + \text{measurement3}$ divided by 3).

Lastly, email me the final measurements (you'll be given instructions regarding emailing when you make a purchase). I am going to copy them on a work sheet, and send YOU back a PDF copy. You check MY work, and tell me all is good. That's when we start.

Everything all set? Let's get started!

When taking measurements the rule is kind of like a good bondage session. Firm, tight, but not so much so that it cuts off circulation. Pull the tape so there are no gaps, but don't compress the skin. The suit is going to fit you, and fit you *well* when you put it on. It may even be a little tough to get on. Anything form fitting out of heavy leather always will be. The extreme compression and force exerted by this suit (the reason you wanted it) comes from lacing it up. Don't second guess how tight you would like it when measuring.

Flip the page and let's take the first measurement.

Let's start with the tape you gathered. We will, later, be measuring your waist. For now, put a piece of tape at your natural waist. Usually right about at the belly button, and it should be the largest point. Don't worry about measuring now, just get that tape stuck on really well, as you'll be using it a lot. It will only hurt a little getting it off!

Two more pieces. Using your dominant leg (right if right handed, and so forth), place a piece of tape directly over the center of your knee, and one directly over your ankle bone - the little nubby part that sticks out. Both of which you can see in the stunt double leg we used here.

Let the measurements begin!

A
Measure around your neck.
Wow, that was tough!

B
Measure across the shoulders. You're looking for bone to bone here, not the muscles (or lack thereof, like me) that are on your shoulders.

C
Getting a little trickier here. Put your hand on your hip. Measure from the same shoulder bone, following the arm, to the wrist bone. The little pointy spot.

D
Hand on hip, place! The same shoulder bone point, to the center of your elbow.

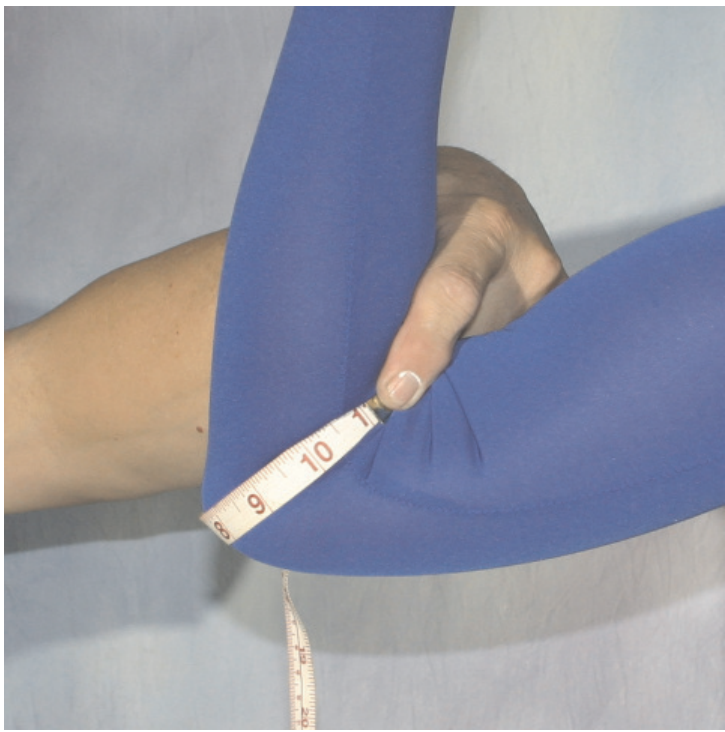

E
Keep your hand on your hip, and measure from that same elbow center to the bone on your wrist.

F
Bicep, flexed.

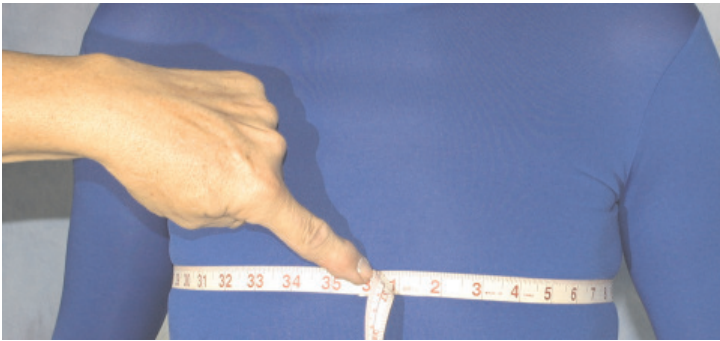

G
Forearm. Start with your arm open, and then bend it to trap the tape. Make sure the tape is over the point of your elbow.

H
Measure around your wrist, at the bone.

I
Let your arm hang naturally by your side. Measure around, over the top of your shoulder and through your pit.

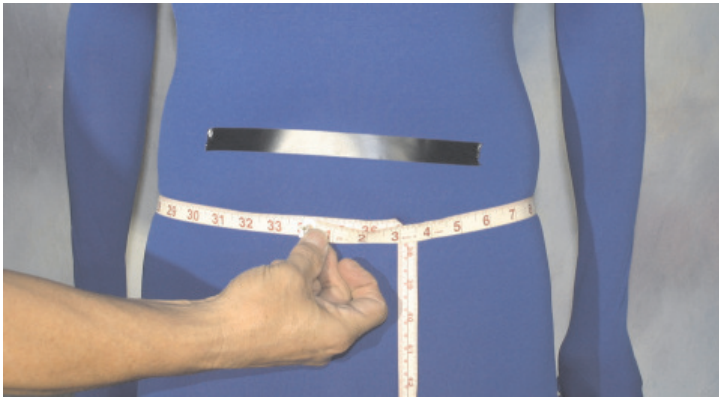

J
The same one you always get when you buy a suit (the kind you can wear to work). Around your chest at the widest part.

This is also the measurement used to decide if there are any sizing upcharges for the suit.

K
Measure around your natural waist, right over the tape that you placed there. Don't cheat here! Leather ain't gonna give when you put this on, and what good is a suit if you can't get in it?

L
Your "pants waist". This is where you would normally wear your jeans.

M
Now measure the distance from your natural waist (the tape) to where you took the measurement for your pants waist.

N
Measure from the hollow point at the base of your neck to the natural waist (tape).

O

Measure through your crotch from your natural waist (tape) to the same point on your back. You hold the tape in the front, and have your buddy be sure he is lined up even with the tape in the front.

P

From the bone at the base of your neck to that same point on the back you just used, even with your natural waist (tape).

Q

Your torso. Find the hollow point at the base of your neck in the front. Hold the tape there. Pass the tape between your legs, not too tight unless you want the "boys" really unhappy, and all the way around to the bone at the base of your neck.

R

Your ass (no, I didn't say YOU'RE an ass). Find the widest part, and be sure the tape is level.

S
Your upper thigh at the widest point.

T
Lower thigh - right above your knee.

U
Measure around your calf, at the widest point.

V
You take the tape. Get the boys out of the way, and find the absolute highest point. This is somewhere between your balls and your asshole. Don't press in (I actually did a little too much in this photo, but I'd already changed before we noticed it). From there to the center of your knee - where you placed the tape we didn't use in these photos, which is why we needed the stunt leg before!

Don't let go of the tape - have your buddy flip the page.

W

Same point up top, to the ankle bone. Or, from crotch to tape.

X

You may want to get a chair to balance for this one. Bend your knee so your lower leg is parallel to the floor and measure from even with the same natural waist (tape) point to the center of the knee.

I have to admit, we were getting a little sloppy toward the end here. We had finished the bondage suit photos and were already into hour three. This should be in a straight line from EVEN with the tape on the outside. Like the white line.

Y
Knee, the center, to your ankle bone. In other words, tape to tape.

Z
Around your ankle at the bone (tape).

If you opted for no tit flaps, your done with the first pass. If you want them, there's only two to go. If this is the first set, please do them again! You see how accurate I am with the measurements, and you need to be just as precise too!

TIT1

I have used a piece of tape here, just to illustrate the point. Find the imaginary line between your tits, and measure from there to the hollow at the base of your neck. If you flip back, this is the same point as you used in "N".

TIT2

From one to the other.

Internal Boot Option

The suit is designed for optimal fit on bare skin, and boots are normally worn externally as seen in this photo. If, however, you want the suit to fit OVER the boot (sorry, we don't have a photo), then at the bottom of the last page please include the following measurements:

- Boot height from ankle (A)
- Around the boot at top (B)
- Around the boot at ankle (C)

DO NOT include these if you want the suit to fit normally!

For your convenience, here is a spot to write down all your measurements.
